

JOSEPH BALL

Full-Stack Software Developer

814-505-8290 | josephball963@gmail.com | Altoona, PA | github.com/jball963 | linkedin.com/in/joseph-ball-18240b264

SUMMARY

Full-stack developer with hands-on experience building and owning production systems end-to-end — from greenfield web applications to inherited desktop codebases shipped to production. Comfortable working independently across the full stack: backend logic, database design, cloud infrastructure, and deployment. Self-directed in learning new tools and establishing efficient development workflows.

PROFESSIONAL EXPERIENCE

Myers Integrated Systems — Lilly, PA

Software Developer | Jun 2024 – Present

Software Development Intern | Apr 2024 – Jun 2024

- Sole developer for two production systems supporting 200+ clients — a Node.js web application and a C#/.NET/WPF desktop clocking application — with no dedicated team or senior oversight.
- Architected and built a client management web application from scratch using Node.js and vanilla JavaScript, serving as the company's internal CRM for support tickets, field service dispatch, client notes, pricing, and a regulatory audit compliance workflow.
- Rescued and shipped an inherited, unfinished C#/.NET/WPF clocking application to production — reverse-engineered an undocumented codebase, refactored core logic, and stabilized the system now actively used across dozens of client sites.
- Migrated legacy clocking data from proprietary .cfg/.dat file storage into SQL Server, converting up to 8 years of historical records and 20,000+ rows per large client into a structured relational database.
- Independently managed full cloud infrastructure lifecycle — deployed initially on Firebase Hosting with Azure SQL, then re-architected onto DigitalOcean with Cloudflare for DNS, reducing complexity and consolidating hosting costs.
- Integrated applications with SQL Server and Azure SQL databases; designed schemas supporting data validation, audit tracking, and multi-year transactional history.
- Fielded support calls and maintained the company's primary point-of-sale codebase, diagnosing and resolving minor bugs to keep client systems running smoothly.
- Manage project planning, issue triage, and release coordination across both production systems, using Claude Code as an integrated part of the workflow to keep development organized and moving efficiently.
- Self-directed adoption of Git/GitHub workflows, cloud services, and deployment pipelines with no formal onboarding or mentorship.

Altoona Area School District — Altoona, PA

IT Helpdesk Support | Aug 2021 – Jun 2022

- Provided technical support to students and faculty, diagnosing and resolving hardware, software, and network issues.
- Documented service tickets and communicated technical information clearly to non-technical staff and administrators.

TECHNICAL SKILLS

Languages:	C#, JavaScript (Node.js, Vanilla JS), SQL, XAML
Frameworks & Platforms:	.NET, WPF, Express.js
Databases:	SQL Server, Azure SQL, T-SQL
Cloud & Infrastructure:	DigitalOcean, Firebase Hosting, Azure, Cloudflare (DNS)
Tools & Practices:	Visual Studio, VS Code, GitHub, Git, REST APIs, MVVM pattern
AI-Assisted Development:	Claude Code — project planning, issue triage, release management
